

## Environmental and Consumer Safety Statement 2020

Tenjam products are compliant with the Consumer Product Safety Improvement Act of 2008, Compliant with California Proposition 65 Act, have zero PVC/Vinyl, zero flame retardant additives, are lead free, and have ultra-low VOC's emissions.

### Cleaning and Sanitizing:

Tenjam products are made with materials that can be easily washed with soap and water and cleaned/sanitized with any chemical that is packaged in a plastic bottle marked with a #2 or #4 recycling symbol. If the cleaning chemical is packaged in #2 & #4 plastic (LDPE & HDPE) it is safe to use on Tenjam furniture. If the cleaning chemical is packaged in a different type of plastic it should first be tested on the bottom of the Tenjam product to make sure it does not harm the product surface. Never use a chemical packaged in a metal container on a Tenjam product. Tenjam products do not have fabric surfaces. Instead, Tenjam products feature waterproof materials that are smooth and easy to spray and wipe clean.

### VOC Emissions:

Session Series hard plastic material and DuraFLEX flexible plastic materials were emission tested by MAS testing labs and "Certified Green" for healthier indoor air quality. These products have ultra-low VOC emissions.
